Initial agenda for a Second Stage of the Energy Transition
Published in April 2023

Some updated goals

100% Zero emission energy in the electricity sector by 2050

-60% Annual GHG emissions from the energy sector by 2050

+80% Renewable Energy by 2030

+2GW Storage capacity by 2030 and +6GW by 2050

GH2 Industry with State vision

Strategic Committee

The Strategic Committee aims to provide strategic and policy orientations, with broad consensus among participants, to constitute a high-level framework for the Green Hydrogen Action Plan and to build a policy narrative that communicates, nationally and internationally, the country's hydrogen directions.

6 strategic pillars.

GH2 Action Plan Milestones 2023-20230

- Complete
- In development
- To start

Concrete actions for this decade

International positioning

Our country has signed various instruments that seek to foster cooperation for the development of the green hydrogen industry.

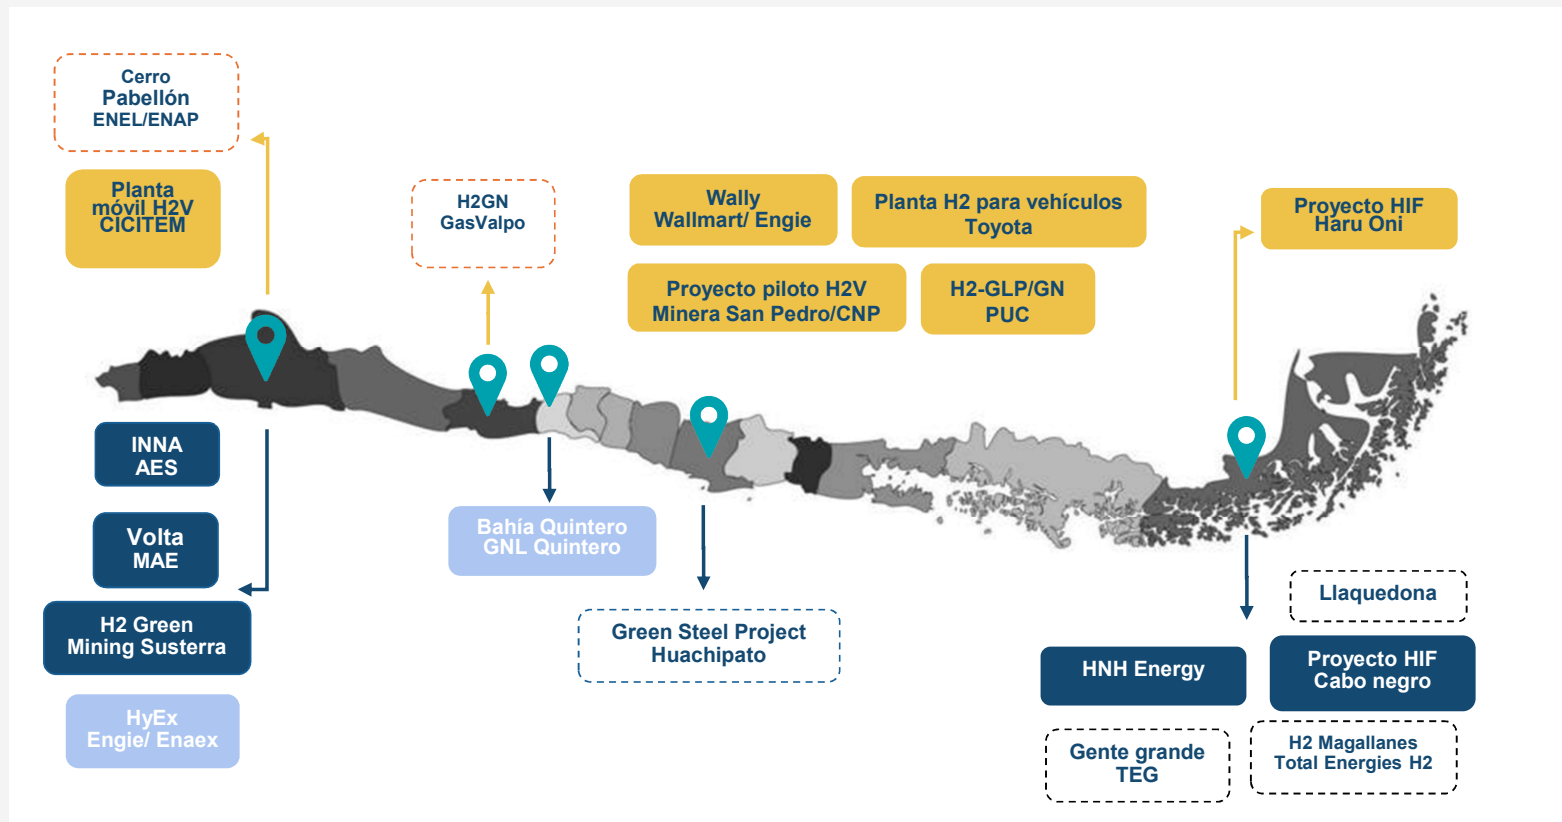

To position ourselves internationally, we require investment in key areas of internal infrastructure: ports, roads, connectivity, etc.

Leverage international collaboration to the country's interests: attracting investment, promoting innovation and technology transfer, training, etc.

Chile must continue with a policy of openness and diversification of its investments, to avoid vulnerability to the concentration of actors.

- 33** FTA – commercial agreement network
- 9** Joint Declarations and Letters of Cooperation
- 7** MoU

Project Development Division

This team from the Ministry of Energy provides continuous support to new and existing companies in the sector.

- Support the technical evaluation through sectorial accompaniment and guidance to energy project holders.
- Carry out diagnoses and propose alternatives to address the problems and difficulties investment projects face.
